CAREER OBJECTIVE

Motivated B.Sc IT student passionate about web development and practical learning. Seeking an opportunity to improve my skills in PHP, MySQL, and backend development while contributing to real-world projects and growing as a developer.

EDUCATION

Five year integrated course of MSc In Information Technology, Computer Science & Technology Vanita Vishram Women's College Of Commerce	2024 - 2029
Five year integrated course of MSc In Information Technology, Science And Technology Vanita Vishram Women's College Of Commerce CGPA: [7.27/10]	2024 - 2027
Higher Secondary Certificate (XII), (GSEB/GSHSEB) Commerce Shishukunj Vidya Vihar & L B Contractor School Percentage: 84.27%	2024
Secondary School Certificate (X), (GSEB) Citizen's School Percentage: 64.32%	2022

TRAININGS / CERTIFICATIONS

NAANDI Training & Placement Certificate
2026
Self-learning, Virtual
(PHP, MySQL, HTML, CSS, Python, Database Management)

PROJECTS

[Student Attendance Management System ↗](#)

August 2026
The Student Attendance Management System is a web-based application that digitizes the everyday task of taking and tracking student attendance, replacing paper registers that are easy to lose, slow to search and prone to mistakes. It is designed for administrators such as teachers, class coordinators or office staff, who log in through a session-based admin login and land on a dashboard showing the total number of students and attendance records. From there, they can add students with their name, roll number and course, edit or delete existing records, mark each student as Present or Absent for a given date, and view a complete attendance report. All data is stored in a central database, so records can be updated and reviewed in seconds instead of being searched through by hand. The project is built with PHP for server-side logic, MySQL for data storage, and HTML and CSS for the interface, and it runs on a local Apache server such as XAMPP/WAMP. It also demonstrates core web development concepts such as CRUD operations, sessions and authentication, form handling and database connectivity.

SKILLS

- | | | |
|------------------------|-----------------------|---------------------|
| • PHP | • MySQL | • HTML |
| • CSS | • Javascript | • DBMS |
| • Problem Solving | • Web development | • GitHub |
| • Frontend development | • Backend development | • Responsive Design |

EXTRA CURRICULAR ACTIVITIES

- I have been actively involved in academic projects, presentations, and team-based activities, where I contributed to planning, execution, and coordination. I have taken initiative in leading small tasks and supporting event organization, which helped me build strong communication, leadership, and problem-solving skills. I have also participated in the ISRO Hackathon 2026, where my team worked on “LunaPath AI” — an AI-powered decision-support concept for lunar subsurface ice detection and mission planning.

ADDITIONAL DETAILS

- Developed a Portfolio Website using HTML and CSS. Which shows user’s Resume and Portfolio about other details. Simple and easy to use coding which is available on GitHub. Anyone can use it to make their personal portfolio. Technically mostly interested in Software Development, Web Development and AI & Emerging Technologies.
